Cynomolgus BTN3A1 Protein, His Tag Cat. No. PME-C100011

## **PRODUCT INFORMATION**

| Target                          | BTN3A1  |
|---------------------------------|---|
| Synonyms                        | Butyrophilin protein  |
| Description                     | Recombinant Cynomolgus BTN3A1 protein with C-<br>terminal 6×His tag   |
| Delivery                        | In Stock  |
| Uniprot ID                      | A0A330KVC6  |
| <b>Expression Host</b>          | HEK293  |
| Тад                             | C-6×His Tag   |
| Molecular<br>Characterization   | BTN3A1(Gln1-Ser218) 6×His tag   |
| Molecular Weight                | The protein has a predicted molecular mass of<br>24.3 kDa after removal of the signal peptide. The<br>apparent molecular mass of cBTN3A1-His is<br>approximately 25-35 kDa due to glycosylation.  |
| Purity                          | The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.  |
| Formulation &<br>Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 %<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions of reconstitution.   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | Butyrophilin subfamily 3 member A1 (BTN3A1) is<br>also known as CD277 and BTF5, which belongs to<br>the immunoglobulin superfamily and contains one<br>B30.2/SPRY domain and two Ig-like V-type<br>(immunoglobulin-like) domains. BTN3A1 plays a<br>role in T-cell activation and in the adaptive<br>immune response. Also, BTN3A1 regulates the<br>proliferation of activated T-cells and the release<br>of cytokines and IFNG by activated T-cells.<br>Furthermore, BTN3A1 mediates the response of<br>T-cells toward infected and transformed cells that<br>are characterized by high levels of<br>phosphorylated metabolites, such as isopentenyl<br>pyrophosphate. |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
