Background

PRODUCT INFORMATION

Target HER3

Monoclonal Cell Line Derived from Jurkat Cells,
Engineered for Stable Expression of Human HER3

Using Lentiviral Technology

Host Cells Jurkat
Uniprot ID P21860
Applications FACS Data

Growth media RPMI-1640+10% FBS+1% P.S+1% Gln+2 ug/mL

Puromycin 5E6 Cells/mL

Suggested Control SKU: BME100244

1. Please inspect cells upon receipt and report any issues promptly. 2. We offer one-time

replacements for issues reported within a week of receipt. 3. User-induced issues are not eligible for free replacements. 4. We do not accept liability for damages resulting from cell use, storage, or

loss. 5. Feedback received more than one month after receipt will not be processed.

Storage & Shipping Cells are shipped using dry ice and require liquid nitrogen storage for long term preservation.

Synonyms HER3; ERBB3

This gene encodes a member of the epidermal growth factor receptor (EGFR) family of receptor tyrosine kinases. This membrane-bound protein has a neuregulin binding domain but not an active kinase domain. It therefore can bind this ligand but not convey the signal into the cell through protein phosphorylation. However; it does form heterodimers with other EGF receptor family members which do have kinase activity. Heterodimerization leads to the activation of pathways which lead to cell proliferation or differentiation. Amplification of this gene and:or

differentiation. Amplification of this gene and:or overexpression of its protein have been reported in numerous cancers; including prostate; bladder; and breast tumors. Alternate transcriptional splice variants encoding different isoforms have been characterized. One isoform lacks the

intermembrane region and is secreted outside the cell. This form acts to modulate the activity of the membrane-bound form. Additional splice variants have also been reported; but they have not been
