

## **PRODUCT INFORMATION**

C-Flag Tag Tag **Target** ADA1B

**Synonyms** ADRA1, ALPHA1BAR

Human ADA1B full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** P35368 **Expression Host HEK293** 

**Protein Families** GPCR, Transmembrane, Druggable Genome,

Calcium regulation in cardiac cells, GPCRDB Class **Protein Pathways** A Rhodopsin-like, Monoamine GPCRs, Cell Cycle,

The human full length ADA1B protein has a MW of

**Molecular Weight** 

Formulation & Reconstitution

**Background** 

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Alpha-1-adrenergic receptors (alpha-1-ARs) are members of the G protein-coupled receptor superfamily. They activate mitogenic responses and regulate growth and proliferation of many cells. There are 3 alpha-1-AR subtypes: alpha-1A, -1B and -1D, all of which signal through the Gq/11 family of G-proteins and different subtypes show different patterns of activation. This gene

encodes alpha-1B-adrenergic receptor, which induces neoplastic transformation when transfected into NIH 3T3 fibroblasts and other cell lines. Thus, this normal cellular gene is identified as a protooncogene. This gene comprises 2 exons and a single large intron of at least 20 kb that interrupts the coding region. [provided by RefSeq,
