

PRODUCT INFORMATION

C-Flag Tag Tag **Target** ADA1D

ADRA1, ADRA1A, ADRA1R, ALPHA1, DAR, **Synonyms**

dJ779E11.2

Human ADA1D full length protein-synthetic Description

nanodisc 6~8weeks

Delivery Uniprot ID P25100 **HEK293 Expression Host**

Protein Families GPCR, Transmembrane, Druggable Genome,

Calcium regulation in cardiac cells, GPCRDB Class A Rhodopsin-like, GPCRDB Other, Monoamine **Protein Pathways**

GPCRs, Cell Cycle,

The human full length ADA1D protein has a MW of **Molecular Weight**

60.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% Formulation & - 8% trehalose is added as protectants before Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

Alpha-1-adrenergic receptors (alpha-1-ARs) are members of the G protein-coupled receptor superfamily. They activate mitogenic responses and regulate growth and proliferation of many cells. There are 3 alpha-1-AR subtypes: alpha-1A, -1B and -1D, all of which signal through the Gq/11 family of G-proteins and different subtypes show different patterns of activation. This gene

encodes alpha-1D-adrenergic receptor. Similar to alpha-1B-adrenergic receptor gene, this gene comprises 2 exons and a single intron that interrupts the coding region. [provided by RefSeq,
