

PRODUCT INFORMATION

Target CD130

Synonyms CD130;CDW130;GP130;IL-6RB

Recombinant human CD130 protein with C-Description

terminal human Fc tag

Delivery Under development

Uniprot ID P40189 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Purity

Background

CD130(Glu23-Glu619) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 91.19 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before

Formulation & lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a signal transducer shared by many cytokines, including interleukin 6 (IL6), ciliary neurotrophic factor (CNTF), leukemia inhibitory factor (LIF), and oncostatin M (OSM). This protein functions as a part of the cytokine receptor complex. The activation of this protein is dependent upon the binding of cytokines to their receptors. vIL6, a protein related to IL6 and encoded by the Kaposi

sarcoma-associated herpesvirus, can bypass the interleukin 6 receptor (IL6R) and directly activate this protein. Knockout studies in mice suggest that this game plays a critical role in regulating

that this gene plays a critical role in regulating myocyte apoptosis. Alternatively spliced

transcript variants have been described. A related pseudogene has been identified on chromosome 17.
