

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target CD151

Synonyms GP27; MER2; PETA-3; RAPH; SFA1; TSPAN24

Human CD151-Strep full length protein-synthetic **Description**

nanodisc 6~8weeks

Delivery Uniprot ID P48509 **Expression Host HEK293**

Protein Families Druggable Genome, Transmembrane

Protein Pathways N/A

The human full length CD151-Strep protein has a **Molecular Weight**

MW of 28.3 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

The protein is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with

Background

integrins and other transmembrane 4 superfamily proteins. It is involved in cellular processes including cell adhesion and may regulate integrin trafficking and/or function. This protein enhances cell motility, invasion and metastasis of cancer

cells. Multiple alternatively spliced transcript variants that encode the same protein have been

described for this gene.

Usage Research use only Conjugate Unconjugated
