

PRODUCT INFORMATION

CD164 **Target**

LMOR; M-OR-1; MOP; MOR; MOR1; OPRM **Synonyms**

Recombinant Human CD164 with C-terminal **Description**

human Fc tag

Delivery In Stock **Uniprot ID** Q04900 **Expression Host** HFK293

Tag C-Human Fc Tag

Molecular

Reconstitution

Storage & Shipping

Purity

CD164(Asp24-Asp162) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of 40.7 kDa after removal of the signal peptide. The **Molecular Weight**

apparent molecular mass of CD164-hFc is

approximately 70-130 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes one of at least three opioid receptors in humans; the mu opioid receptor (MOR). The MOR is the principal target of

endogenous opioid peptides and opioid analgesic agents such as beta-endorphin and enkephalins.

The MOR also has an important role in dependence to other drugs of abuse, such as nicotine, cocaine, and alcohol via its modulation

of the dopamine system. The NM_001008503.2:c.118A>G allele has been **Background**

associated with opioid and alcohol addiction and variations in pain sensitivity but evidence for it having a causal role is conflicting. Multiple transcript variants encoding different isoforms have been found for this gene. Though the canonical MOR belongs to the superfamily of 7-transmembrane-spanning G-protein-coupled receptors some isoforms of this gene have only 6 transmembrane domains. [provided by RefSeq,
