

PRODUCT INFORMATION

C-Flag Tag Tag

CD20 **Target**

Synonyms B1; Bp35; CVID5; FMC7; LEU-16; MS4A1; S7

Human CD20 full length protein membrane **Description** nanoparticles (MNPs)

Delivery In Stock **Uniprot ID** P11836 **Expression Host HEK293**

Protein Families Druggable Genome, Transmembrane

Protein Pathways Hematopoietic cell lineage

The human full length CD20 protein has a MW of **Molecular Weight**

33.1 kDa

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Reconstitution for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

A member of the membrane-spanning 4A gene family. Members of this nascent protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among

hematopoietic cells and nonlymphoid tissues. This gene encodes a B-lymphocyte surface molecule **Background** which plays a role in the development and

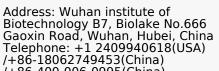

differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which

ELISA assay to evaluate CD20-MNPs 0.5µg Human CD20-MNPs per well

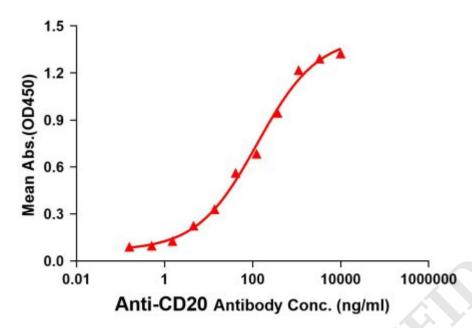

Figure 1. Elisa plates were pre-coated with $0.5\mu g/per$ well purified human CD20 full length membrane nanoparticles. Serial diluted anti-CD20 monoclonal antibody (BME100160) solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-CD20 monoclonal antibody binding with CD20 full length membrane nanoparticles is 128.8ng/ml.

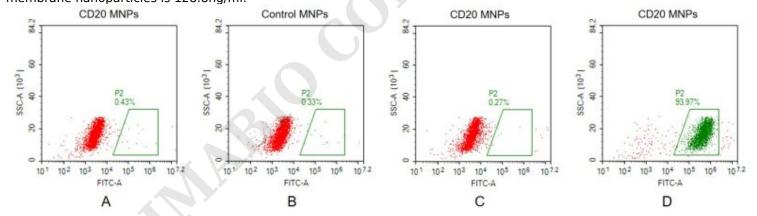

Figure 2. FACS analysis of CD20 MNPs

A. Negative Control 1: CD20 full length membrane nanoparticles samples were stained only with Goat anti-human IgG 488

B. Negative Control 2: Control membrane nanoparticles samples were stained with anti-CD20 antibody (BME100160) at 2µg/mL, followed by Goat anti-human IgG 488 secondary antibody.

C. Negative Control 3: CD20 full length membrane nanoparticles samples were stained with anti-CCR8 antibody (an interest artibody) at 2µg/mL followed by Goat anti-human IgG 488 secondary antibody. irrelevant antibody) at 2µg/mL, followed by Goat anti-human IgG 488 secondary antibody. D. CD20 full length membrane nanoparticles samples were stained with anti-CD20 antibody (BME100160) at 2µg/mL,

followed by Goat anti-human IgG 488 secondary antibody.
