

## **PRODUCT INFORMATION**

CD200R1 **Target** 

**Synonyms** CD200R;HCRTR2;MOX2R;OX2R

Recombinant Human CD200R1 Protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock **Uniprot ID Q8TD46 HEK293 Expression Host** Tag C-6×His Tag

Molecular

CD200R1(Met29-Leu243) 6×His tag Characterization

The protein has a predicted molecular mass of

25.0 kDa after removal of the signal peptide. The apparent molecular mass of CD200R1-His is **Molecular Weight** approximately 35-70 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a receptor for the OX-2 membrane glycoprotein. Both the receptor and substrate are cell surface glycoproteins

containing two immunoglobulin-like domains. This receptor is restricted to the surfaces of myeloid

lineage cells and the receptor-substrate interaction may function as a myeloid **Background** 

downregulatory signal. Mouse studies of a related gene suggest that this interaction may control myeloid function in a tissue-specific manner. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, Jul 2008]

Research use only

Conjugate Unconjugated
