

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target CELR2

Synonyms ADGRC2, CDHF10, EGFL2, Flamingo1, MEGF3

Human CELR2-Strep full length protein-synthetic

Description Human C nanodisc

Delivery 6~8weeks
Uniprot ID Q9HCU4
Expression Host HEK293

Protein Families Transmembrane, Druggable Genome,

Protein Pathways GPCRDB Other,

Molecular Weight

The human full length CELR2-Strep protein has a

MW of 317.5 kDa

Formulation & Reconstitution Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Storage & Shipping intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

The protein encoded by this gene is a member of the flamingo subfamily, part of the cadherin superfamily. The flamingo subfamily consists of nonclassic-type cadherins; a subpopulation that does not interact with catenins. The flamingo cadherins are located at the plasma membrane and have nine cadherin domains, seven epidermal growth factor-like repeats and two laminin A G-type repeats in their ectodomain.

laminin A G-type repeats in their ectodomain. They also have seven transmembrane domains, a characteristic unique to this subfamily. It is postulated that these proteins are receptors involved in contact-mediated communication, with cadherin domains acting as homophilic binding regions and the EGF-like domains involved in cell adhesion and receptor-ligand interactions. The specific function of this
