

PRODUCT INFORMATION

C-Flag Tag Tag

CLIC3 **Target Synonyms** N/A

Human CLIC3 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** 095833 **Expression Host HEK293**

Protein Families Ion Channels: Other

Protein Pathways N/A

Background

The human full length CLIC3 protein has a MW of **Molecular Weight**

26.6kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

Chloride channels are a diverse group of proteins that regulate fundamental cellular processes

including stabilization of cell membrane potential, transepithelial transport, maintenance of intracellular pH, and regulation of cell volume. Chloride intracellular channel 3 is a member of the n64 family and is producing the next family and is produced to the next family and the p64 family and is predominantly localized in the nucleus and stimulates chloride ion channel

activity. In addition, this protein may participate in cellular growth control, based on its association with ERK7, a member of the MAP kinase family. [provided by RefSeq, Jul 2008]
