

PRODUCT INFORMATION

CXCL1 **Target**

Synonyms FSP;GRO1;GROa;MGSA;MGSA-a;NAP-3;SCYB1

Recombinant Human CXCL1 with N-terminal **Description** human Fc tag

Delivery In Stock **Uniprot ID** P09341 **Expression Host HEK293**

Tag N-Human Fc Tag

Molecular

Background

hFc(Glu99-Ala330) CXCL1(Ala35-Asn107) Characterization

The protein has a predicted molecular mass of 34.0 kDa after removal of the signal peptide.The **Molecular Weight**

apparent molecular mass of hFc-CXCL1 is approximately 35-40 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This antimicrobial gene encodes a member of the CXC subfamily of chemokines. The encoded protein is a secreted growth factor that signals through the G-protein coupled receptor, CXC receptor 2. This protein plays a role in inflammation and as a chemoattractant for neutrophils. Aberrant expression of this protein is

associated with the growth and progression of certain tumors. A naturally occurring processed form of this protein has increased chemotactic activity. Alternate splicing results in coding and non-coding variants of this gene. A pseudogene of this gene is found on chromosome 4. [provided by

RefSeq, Sep 2014]

Usage Research use only Conjugate Unconjugated
