**Description** 

## **PRODUCT INFORMATION**

FGF-19 **Target** 

**Synonyms** Fibroblast growth factor 19;FGF-19;FGF19

> Recombinant Human Fibroblast Growth Factor 19 is produced by our E.coli expression system and

the target gene encoding Phe27-Lys216 is expressed with a 6His tag at the N-terminus.

**Delivery** In Stock **Uniprot ID** 095750 **Expression Host** E.coli

Tag

Molecular Not available Characterization

**Molecular Weight** 23.5 KDa

Storage & Shipping

**Background** 

Greater than 95% as determined by reducing **Purity** 

Formulation & Lyophilized from a 0.2 µm filtered solution of

20mM Tris-HCl, 150mM NaCl, 1mM EDTA, pH 8.0. Reconstitution

> Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Fibroblast growth factor 19 (FGF19) is a secreted protein which belongs to the FGFs family. FGF19 is expressed in fetal brain, cartilage, retina, and adult gall bladder. FGFs modulate cellular activity via at least 5 distinct subfamilies of high-affinity FGF receptors (FGFRs): FGFR-1, -2, -3, and -4, all with intrinsic tyrosine kinase activity. FGFRs can be important for regulation of glysoso and ligid be important for regulation of glucose and lipid homeostasis. FGF19 has important roles as a

hormone produced in the ileum in response to bile acid absorption. It has been shown to cause resistance to diet-induced obesity and insulin desensitization and to improve insulin, glucose, and lipid profiles in diabetic rodents. FGF19 can

be considered as a regulator of energy

expenditure.
