**Delivery** 

Reconstitution

**Background** 

Storage & Shipping

## **PRODUCT INFORMATION**

Tag C-Flag Tag

FPR2 **Target** 

ALX, ALXR, FMLP-R-II, FMLPX, FPR2A, FPRH1, **Synonyms** 

FPRH2, FPRL1, HM63, LXA4R

Human FPR2 full length protein-synthetic Description

nanodisc 6~8weeks

P25090 **Uniprot ID Expression Host HEK293** 

**Protein Families** GPCR, Transmembrane, Druggable Genome, GPCRDB Class A Rhodopsin-like, Peptide **Protein Pathways** 

GPCRs, Angiogenesis,

The human full length FPR2 protein has a MW of Molecular Weight

39kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before Formulation &

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Low affinity receptor for N-formyl-methionyl peptides, which are powerful neutrophil chemotactic factors (PubMed:1374236). Binding of FMLP to the receptor causes activation of neutrophils (PubMed:1374236). This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (PubMed:1374236). The activation of LXA4R could result in an anti-inflammatory

outcome counteracting the actions of proinflammatory signals such as LTB4 (leukotriene B4) (PubMed:9547339). Receptor for the chemokine-like protein FAM19A5, mediating FAM19A5-stimulated macrophage chemotaxis and the inhibitory effect on TNFSF11/RANKL-lindured extended effectivities (PV) induced osteoclast differentiation (By similarity).[UniProtKB/Swiss-Prot Function]
