

PRODUCT INFORMATION

GHR Target

Synonyms GHBP;GHIP

Recombinant Human GHR with C-terminal human **Description**

Fc tag In Stock

Uniprot ID P10912 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Reconstitution

Background

Delivery

GHR(Ala27-Tyr264) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

53.8 kDa after removal of the signal peptide. The apparent molecular mass of GHR-hFc is **Molecular Weight**

approximately 55-100 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the type I cytokine receptor family, which is a

transmembrane receptor for growth hormone. Binding of growth hormone to the receptor leads to receptor dimerization and the activation of an

intra- and intercellular signal transduction pathway leading to growth. Mutations in this gene have been associated with Laron syndrome, also known as the growth hormone insensitivity syndrome (GHIS), a disorder characterized by short stature. In humans and rabbits, but not rodents, growth hormone binding protein (GHBP)

is generated by proteolytic cleavage of the extracellular ligand-binding domain from the mature growth hormone receptor protein.
