

PRODUCT INFORMATION

C-Flag Tag Tag **Target** GRIA1

Synonyms GLUH1, GLUR1, GLURA, GluA1, HBGR1 Human GRIA1 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P42261 **Expression Host HEK293**

Protein Families Ion Channels: Glutamate Receptors

Protein Pathways N/A

The human full length GRIA1 protein has a MW of **Molecular Weight**

101.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

Glutamate receptors are the predominant excitatory neurotransmitter receptors in the mammalian brain and are activated in a variety of normal neurophysiologic processes. These

receptors are heteromeric protein complexes with

multiple subunits, each possessing

transmembrane regions, and all arranged to form **Background** a ligand-gated ion channel. The classification of

glutamate receptors is based on their activation by different pharmacologic agonists. This gene belongs to a family of alpha-amino-3-hydroxy-5methyl-4-isoxazole propionate (AMPA) receptors. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
