

PRODUCT INFORMATION

Target ITGA4

IA4; CD49D **Synonyms**

Recombinant human ITGA4(1-977) Acidic tail Description

Protein with C-terminal human Fc tag

Delivery In Stock **Uniprot ID** P13612 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Purity

Background

ITGA4(Met1-Thr977) Acidic tail hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 131.8 kDa after removal of the signal peptide.

The purity of the protein is greater than 90% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before

Formulation & lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The gene encodes a member of the integrin alpha

chain family of proteins. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain that function in cell surface adhesion and signaling. The encoded preproprotein is proteolytically

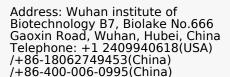

processed to generate light and heavy chains that comprise the alpha 4 subunit. This subunit associates with a beta 1 or beta 7 subunit to form

an integrin that may play a role in cell motility and migration. This integrin is a therapeutic target for the treatment of multiple sclerosis, Crohn's disease and inflammatory bowel disease. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2015]

Usage Research use only

Conjugate Unconjugated
