

## **PRODUCT INFORMATION**

JAM-A **Target** 

**Synonyms** CD321;JAM;JAM1;JAMA;JCAM;KAT;PAM-1

Recombinant Human JAM-A Protein with C-**Description** 

terminal human Fc tag

**Delivery** In Stock **Uniprot ID** Q9Y624 **HEK293 Expression Host** 

Tag C-Human Fc Tag

Molecular

Storage & Shipping

JAM-A(Ser28-Val238) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 

49.1 kDa after removal of the signal peptide. The apparent molecular mass of JAM-A-hFc is

approximately 55-70 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Tight junctions represent one mode of cell-to-cell adhesion in epithelial or endothelial cell sheets, forming continuous seals around cells and serving as a physical barrier to prevent solutes and water

from passing freely through the paracellular space. The protein encoded by this immunoglobulin superfamily gene member is an **Background** 

important regulator of tight junction assembly in epithelia. In addition, the encoded protein can act as (1) a receptor for reovirus, (2) a ligand for the

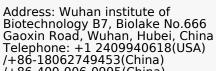

integrin LFA1, involved in leukocyte transmigration, and (3) a platelet receptor.

Multiple 5' alternatively spliced variants, encoding the same protein, have been identified but their biological validity has not been established.
