

PRODUCT INFORMATION

Tag C-Flag Tag
Target KCTD7

Synonyms CLN14, EPM3

DescriptionHuman KCTD7 full length protein-synthetic

nanodisc

Delivery 6~8weeks

Uniprot ID Q96MP8

Expression Host HEK293

Protein Families Ion Channels: Other

Protein Pathways N/A

Background

Molecular Weight

The human full length KCTD7 protein has a MW of

33.1kDa

Formulation & Reconstitution Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution.
Store at -20°C to -80°C for 12 months in
lyophilized form. After reconstitution, if not

Storage & Shipping intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.
This gene encodes a member of the potassium

channel tetramerization domain-containing protein family. Family members are identified on a structural basis and contain an amino-terminal domain similar to the T1 domain present in the voltage-gated potassium channel. Mutations in this gene have been associated with progressive

myoclonic epilepsy-3. Alternative splicing results in multiple transcript variants.[provided by
