

PRODUCT INFORMATION

LAIR2 **Target** CD306 **Synonyms**

Recombinant human LAIR2 Protein with C-**Description**

terminal human Fc tag

Delivery In Stock **Uniprot ID** Q6ISS4 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Molecular Weight

Background

LAIR2(Gln22-Pro152) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

40.2 kDa after removal of the signal peptide. The apparent molecular mass of LAIR2-hFc is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a member of the immunoglobulin superfamily. It was identified

by its similarity to leukocyte-associated immunoglobulin-like receptor 1, a membrane-bound receptor that modulates innate immune response. The protein encoded by this locus is a soluble receptor that may play roles in both

inhibition of collagen-induced platelet

aggregation and vessel formation during placental implantation. This gene maps to a region of 19q13.4, termed the leukocyte receptor cluster, which contains 29 genes in the

immunoglobulin superfamily. Alternatively spliced transcript variants have been described for this
