

PRODUCT INFORMATION

LDLR Target

Synonyms FH;FHC;FHCL1;LDLCQ2

Recombinant Human LDLR Protein with C-**Description**

terminal 6×His tag

Delivery In Stock **Uniprot ID** P01130 **Expression Host HEK293** Tag C-6×His Tag

Molecular

Background

LDLR(Ala22-Arg788) 6×His tag Characterization

The protein has a predicted molecular mass of

85.6 kDa after removal of the signal peptide. The apparent molecular mass of LDLR-His is **Molecular Weight**

approximately 100-130 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The low density lipoprotein receptor (LDLR) gene family consists of cell surface proteins involved in receptor-mediated endocytosis of specific ligands. Low density lipoprotein (LDL) is normally bound at the cell membrane and taken into the cell ending up in lysosomes where the protein is degraded and the cholesterol is made available for

repression of microsomal enzyme 3-hydroxy-3-methylglutaryl coenzyme A (HMG CoA) reductase, the rate-limiting step in cholesterol synthesis. At

the same time, a reciprocal stimulation of cholesterol ester synthesis takes place. Mutations in this gene cause the autosomal dominant disorder, familial hypercholesterolemia. Alternate
