

## **PRODUCT INFORMATION**

Tag C-Flag Tag **Target** OR2H2

FAT11, OLFR2, OLFR42B, OR2H3, dJ271M21.2, **Synonyms** 

hs6M1-12

Human OR2H2 full length protein-synthetic Description

nanodisc 6~8weeks

**Delivery Uniprot ID** 095918 HFK293 **Expression Host** 

**Protein Families** Transmembrane, Druggable Genome, **Protein Pathways** GPCRDB Class A Rhodopsin-like.

The human full length OR2H2 protein has a MW of **Molecular Weight** 

34.8kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and

hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor

genes and proteins for this organism is

independent of other organisms. [provided by

RefSeq, Jul 2008] Research use only

**Usage** Conjugate Unconjugated

**Background**
