Cat. No. FLP100731

PRODUCT INFORMATION

TagC-Flag TagTargetSCN1B

Synonyms ATFB13, BRGDA5, DEE52, EIEE52, GEFSP1
Human SCN1B full length protein-synthetic

Delivery 6~8weeks
Uniprot ID Q07699
Expression Host HEK293

Protein Families Ion Channels: Sodium

Protein Pathways N/A

Background

Molecular Weight

The human full length SCN1B protein has a MW of

24.7kDa

Formulation & Reconstitution Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

tor

Storage & Shipping

Storag

Lyophilized proteins are shipped at ambient

temperature.

Voltage-gated sodium channels are heteromeric proteins that function in the generation and propagation of action potentials in muscle and neuronal cells. They are composed of one alpha and two beta subunits, where the alpha subunit provides channel activity and the beta-1 subunit modulates the kinetics of channel inactivation. This gene encodes a sodium channel beta-1 subunit. Mutations in this gene result in

subunit. Mutations in this gene result in generalized epilepsy with febrile seizures plus, Brugada syndrome 5, and defects in cardiac conduction. Multiple transcript variants encoding different isoforms have been found for this
