

## **PRODUCT INFORMATION**

**SPARC Target** 

**Synonyms** BM-40;Osteonectin;ON

Recombinant human SPARC protein with N-**Description** 

terminal human Fc tag

**Delivery** In Stock **Uniprot ID** P09486 **Expression Host HEK293** 

Tag N-Human Fc Tag

Molecular

**Background** 

hFc(Glu99-Ala330) SPARC(Ala18-Ile303) Characterization

The protein has a predicted molecular mass of

58.8 kDa after removal of the signal peptide. The **Molecular Weight** apparent molecular mass of hFc-SPARC is

approximately 55-70 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a cysteine-rich acidic matrix-associated protein. The encoded protein is required for the collagen in bone to become calcified but is also involved in extracellular matrix synthesis and promotion of changes to cell shape. The gene product has been associated with tumor suppression but has also been

correlated with metastasis based on changes to cell shape which can promote tumor cell invasion. Three transcript variants encoding different

isoforms have been found for this gene. [provided
