

PRODUCT INFORMATION

Tag C-Flag Tag TRPV6 **Target**

ABP/ZF; CAT1; CATL; ECAC2; HRPTTN; HSA277909; LP6728; ZFAB **Synonyms**

Human TRPV6 full length protein-synthetic Description

nanodisc In Stock

Delivery Uniprot ID Q9H1D0 **Expression Host HEK293**

Druggable Genome, Ion Channels: Transient **Protein Families**

receptor potential, Transmembrane

Protein Pathways

Formulation &

Reconstitution

Storage & Shipping

Background

The human full length TRPV6 protein has a MW of 87.3 kDa **Molecular Weight**

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

A member of a family of multipass membrane proteins that functions as calcium channels. The encoded protein contains N-terminal ankyrin repeats, which are required for channel assembly and regulation. Translation initiation for this protein occurs at a non-AUG start codon that is decoded as methionine. This gene is situated next to a closely related gene for transient

receptor potential cation channel subfamily V member 5 (TRPV5). This locus has experienced positive selection in non-African populations, resulting in several non-synonymous codon differences among individuals of different genetic

backgrounds.

Usage Research use only Conjugate Unconjugated

ELISA assay to evaluate TRPV6-Nanodisc 0.2µg Human TRPV6-Nanodisc per well

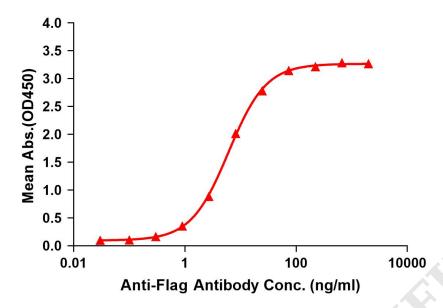

Figure 1. Elisa plates were pre-coated with Flag Tag TRPV6-Nanodisc ($0.2\mu g/per$ well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with TRPV6-Nanodisc is 6.111ng/ml.
