

PRODUCT INFORMATION

ULBP2 **Target**

ALCAN-alpha; N2DL2; NKG2DL2; RAET1H; RAET1L **Synonyms**

Recombinant Human ULBP2 Protein with C-**Description**

terminal 6×His tag

Delivery In Stock **Uniprot ID** Q9BZM5 **Expression Host HEK293** Tag

C-6×His Tag

Molecular ULBP2(Gly26-Ser216) 6×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight**

22.5 kDa after removal of the signal peptide. The apparent molecular mass of ULBP2-His is

approximately 15-35 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a major histocompatibility complex (MHC) class I-related molecule that binds to the NKG2D receptor on natural killer (NK) cells to trigger release of multiple cytokines and chemokines that in turn contribute to the recruitment and activation of NK cells. The encoded protein undergoes further processing to

generate the mature protein that is either

Background anchored to membrane via a

glycosylphosphatidylinositol moiety, or secreted.
Many malignant cells secrete the encoded protein
to evade immunosurveillance by NK cells. This gene is located in a cluster of multiple MHC class Ĭ-related genes on chromosome 6. [provided by

RefSeq, Jul 2015]

Usage Research use only Conjugate Unconjugated
